

PETER THE PLUG

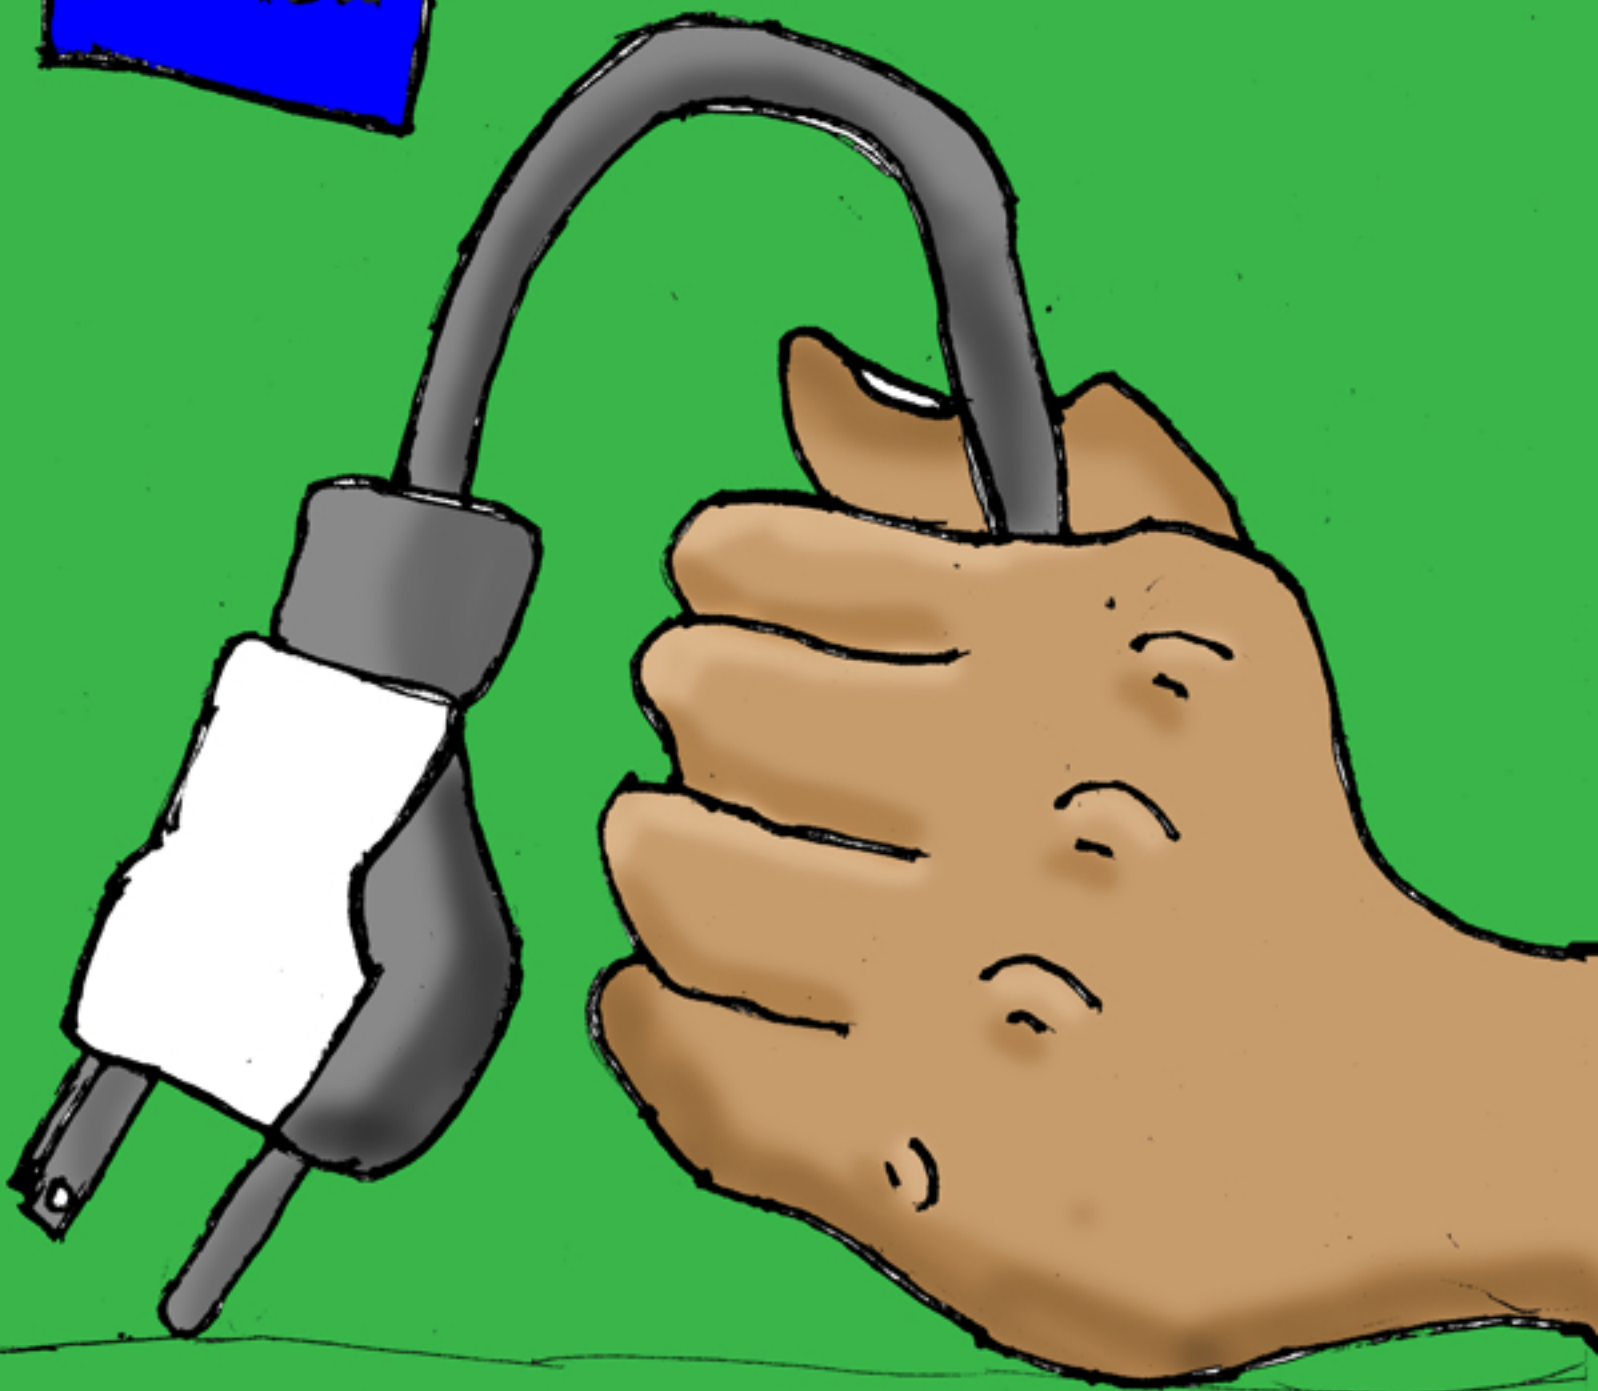

By Zachary Ching

LEARN

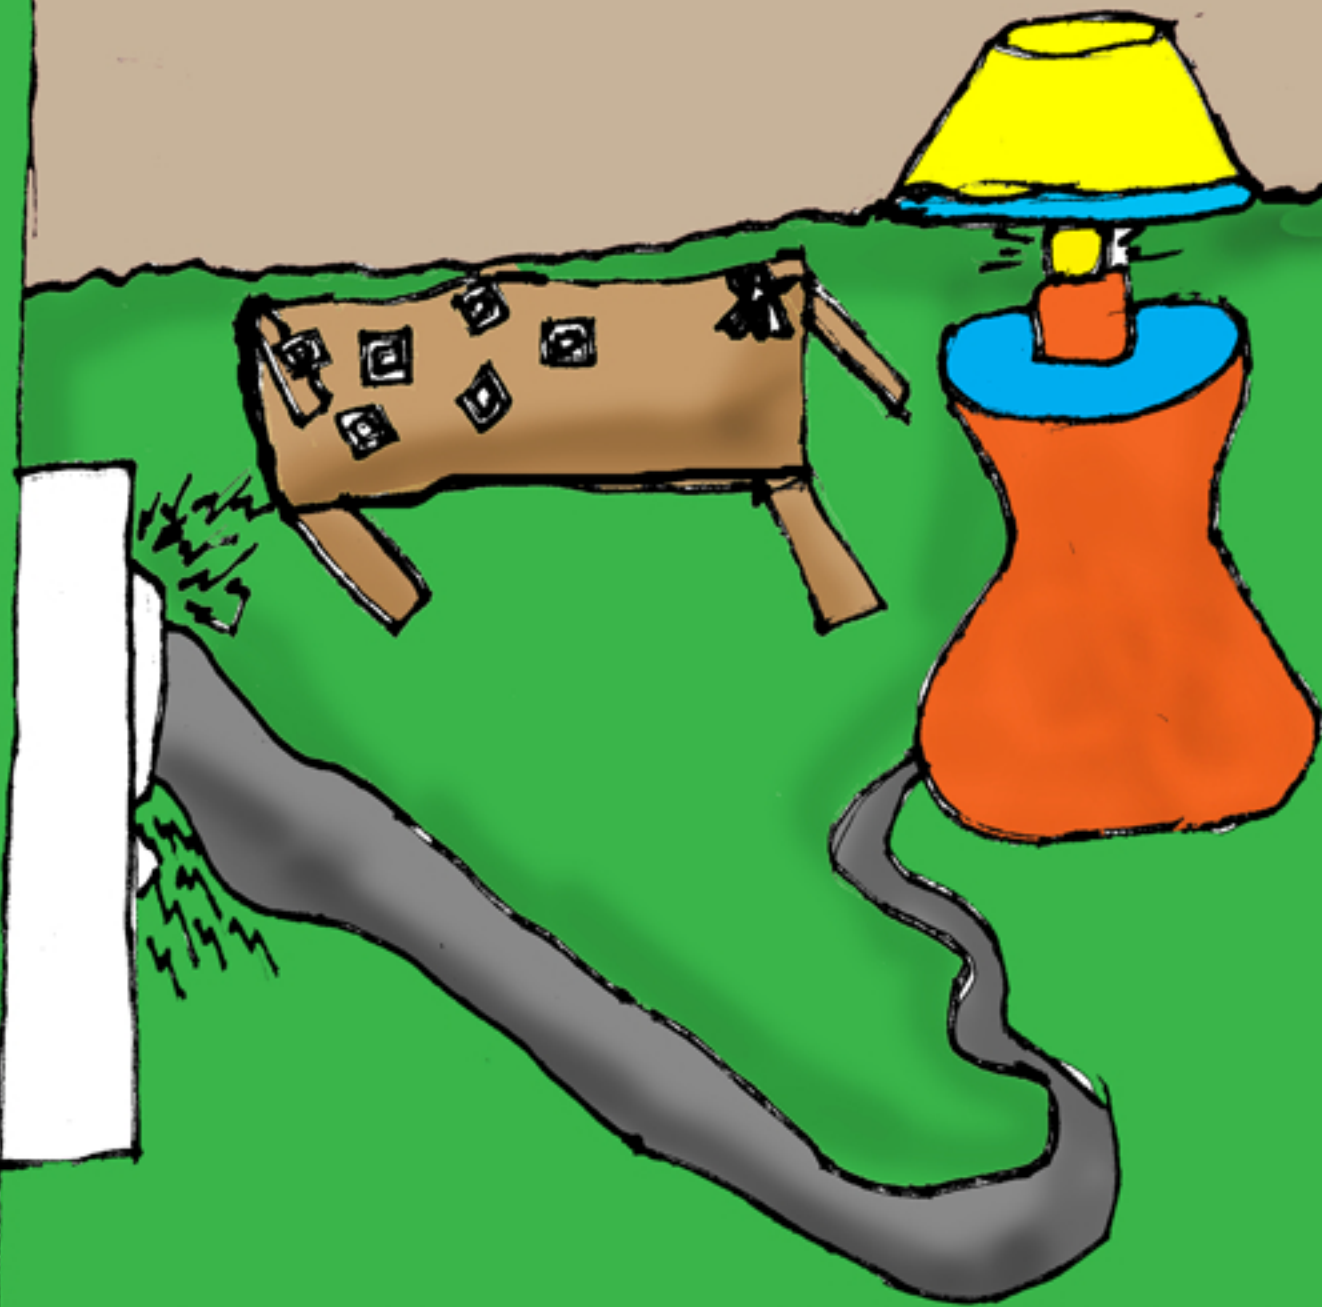

The lifeless Peter the plug fascinates young Andrew.

Andrew

Andrew the boy AWAKENS Peter the Plug by plugging him into the wall. Using endless amounts of killowats hopefully for the families use.

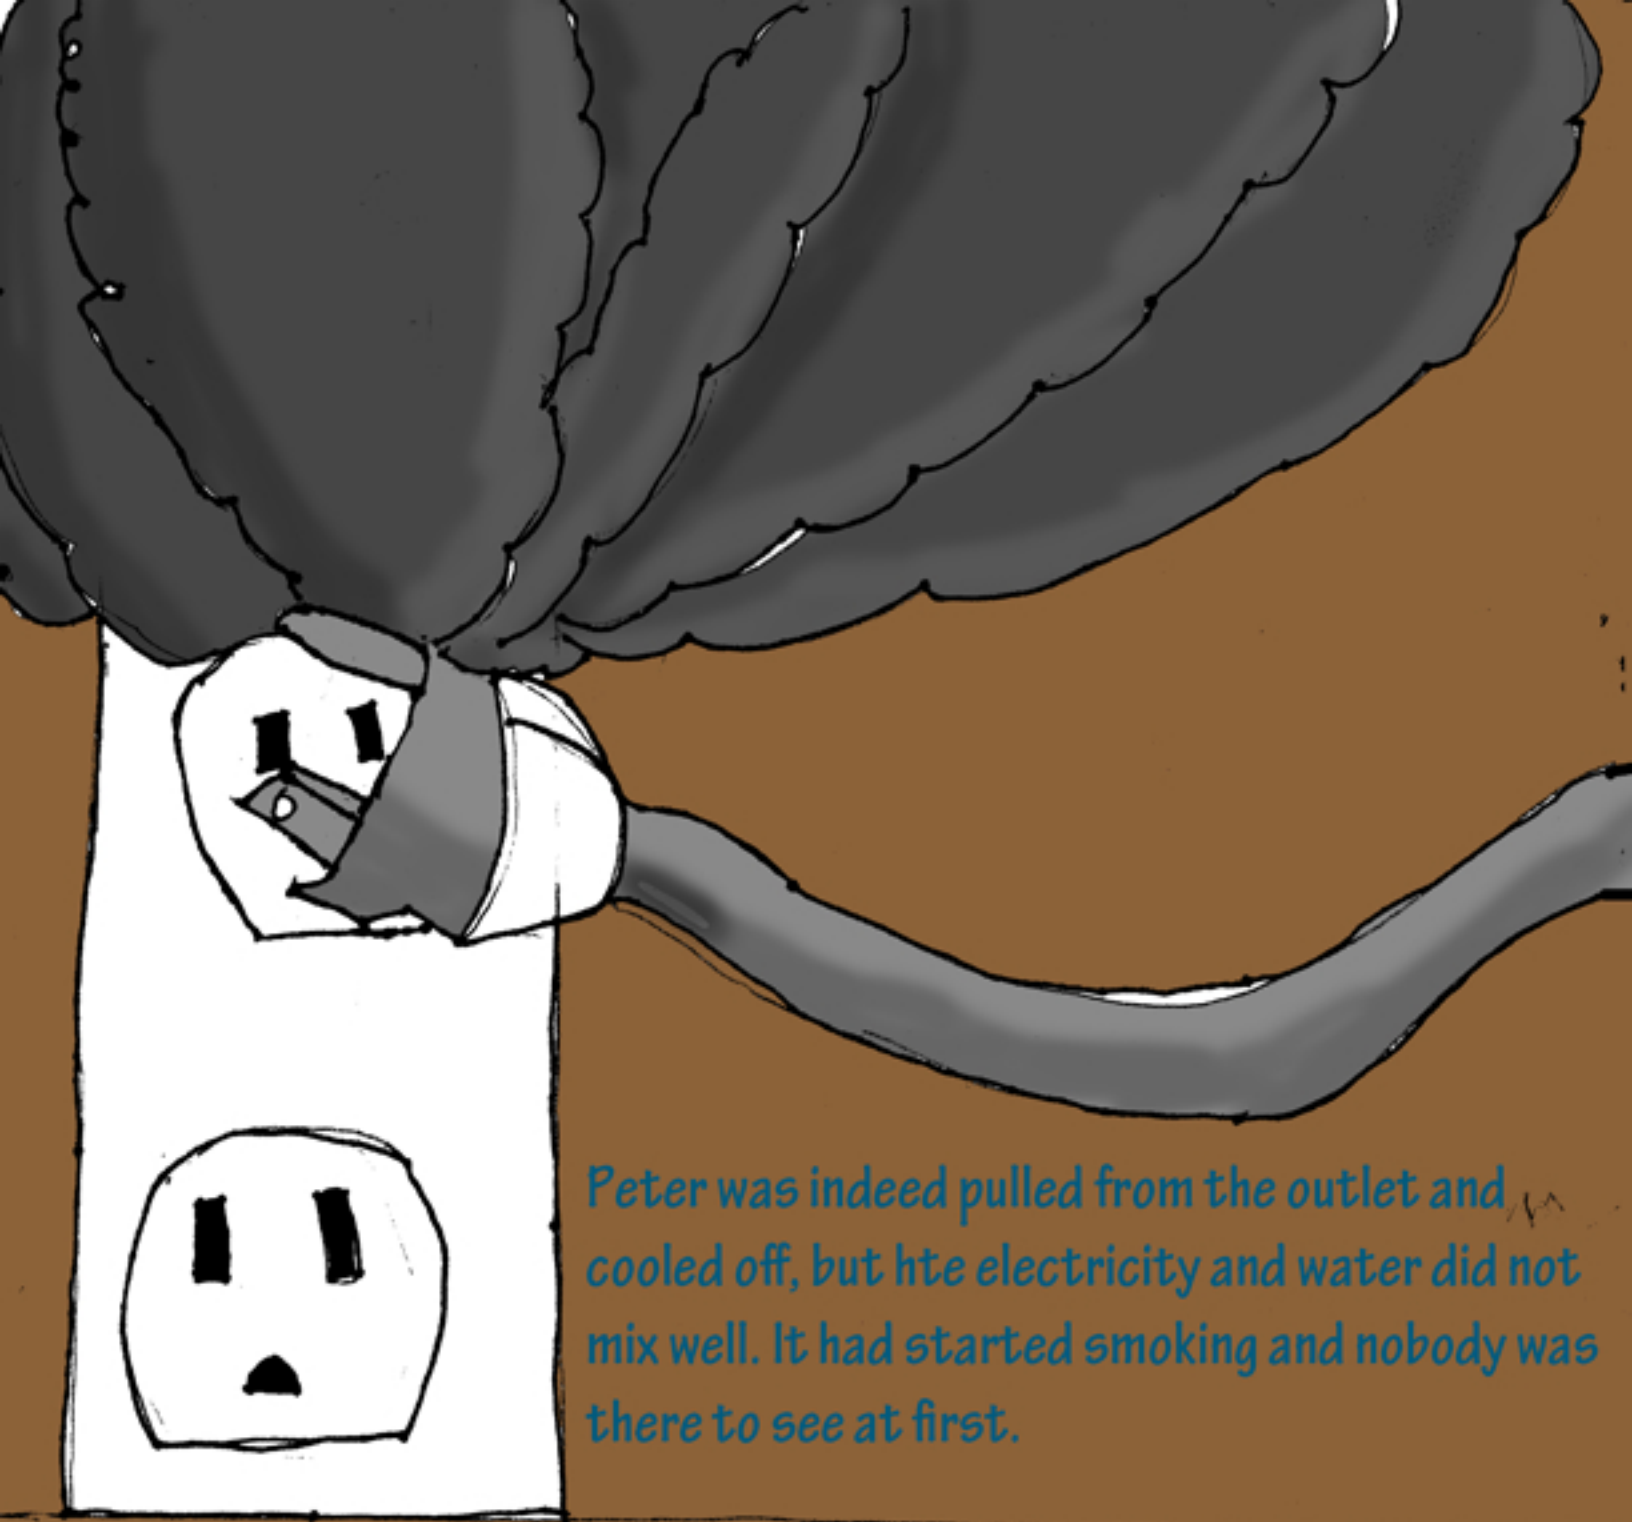

Peter's electric energy must power something, right? Well that something is Landon the lamp who shines brighter than ever when the two of them work together!

Unfortunately as much as Landon the lamp helps the family when he is left on every hour he is using 1.4 kwh a day when left on all day and night. Peter needs to also work hard and while his energy is draining, the family electric bills are rising.

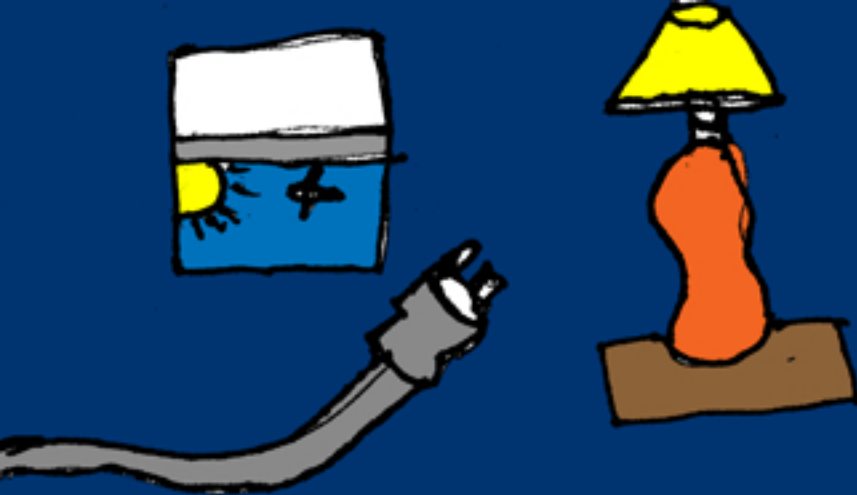

“I am tired of working I dont want to do this anymore”. “Landon pour that glass of water on me” Peter says. He did that because energy comes from fossil fuels, which is a non-renewable resource. A Simple power strip could have saved them energy.

Peter was indeed pulled from the outlet and cooled off, but hte electricity and water did not mix well. It had started smoking and nobody was there to see at first.

The dad grabs the fire extinguisher as soon as he smells the smoke and sprays the fire down before it becomes very dangerous.

“Andrew, always unplug or turn off lights or plugs when not in use of it. Leaving a plug in can be a fire hazard” Andrews dad says. “Saving energy is a life long lesson. Lets put it to work”.
