

Bolt It On

By: Conner White

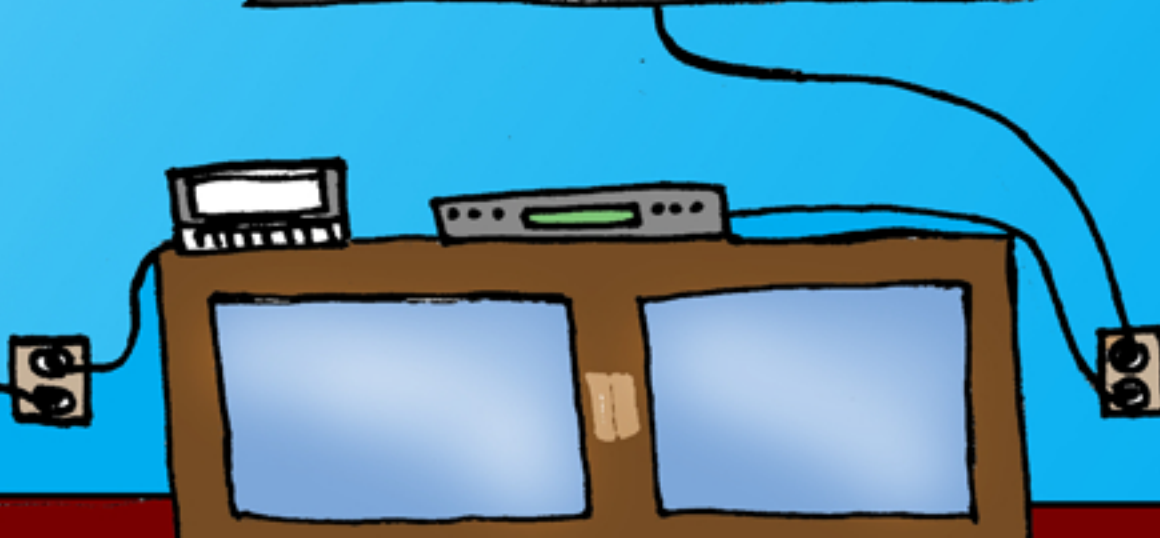

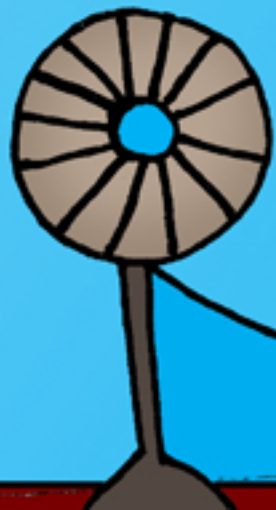

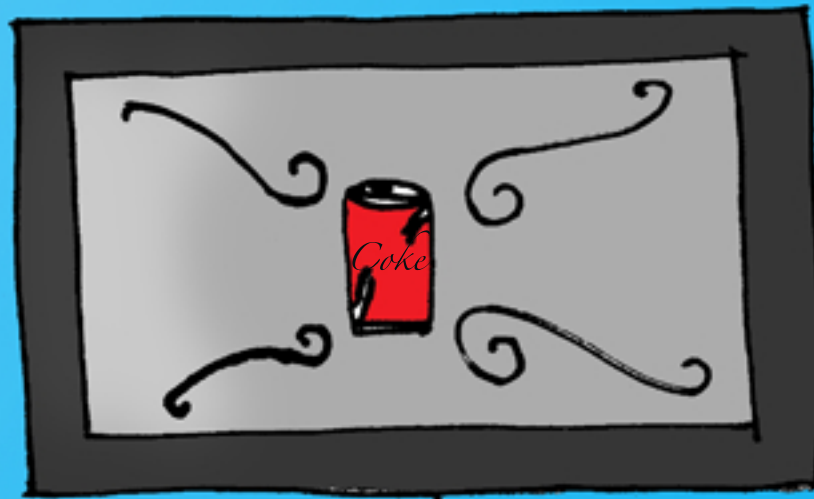

"Hi kids, I'm Sammy the Saver. Try to unplug all chargers from every outlet, and use power strips. Even is you are not using one of your appliances, if it is still plugged in, it is using about 40% of your electricity."

"Hi kids, I'm Wally the waster. We should all use as much electricity as we want! We don't need to save electricity, let's just keep all our lights on and plug everything in."

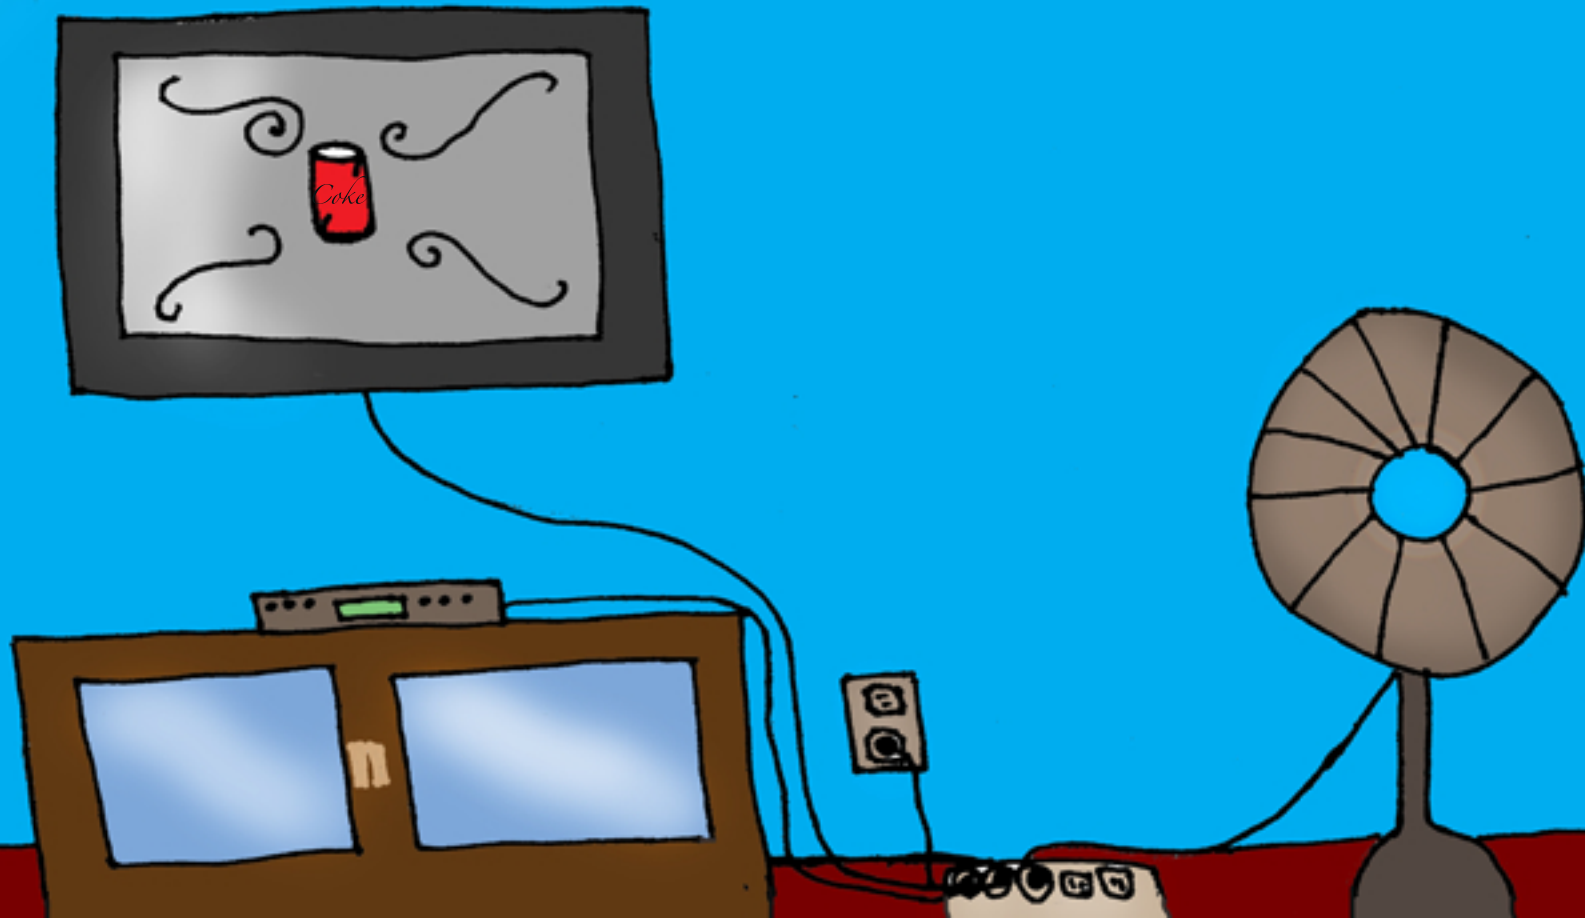

"Hey kids why don't we watch some TV. It's getting a little toasty don't you think? Why don't we plug the fan in? I think you should charge your laptop, even though it's fully charged." Said Wally Waster.

"Hey kids make sure you are using power strips. If you use power strips all you have to unplug is one thing, when it is not in use. That way you save much more electricity." Said Sammy the Saver.

"Did you know that when your chargers are plugged into the wall it is using 95% of your electricity. But, when your electronics are charging it is only using 5% of your electricity. So, make sure you unplug all your chargers from its outlets."

"Uh oh the powers out. Sorry kids, I guess we used too much electricity. Well at least you have the stars to light up the night." Said Wally the Waster.

"Great job kids! You guys did a great job saving electricity. Please don't follow Wally the waster.

Wasting electricity isn't right." Said Sammy the Saver.

"Wally, you know that it wasn't right teaching these kids to waste electricity." Sammy the Saver said upset.

"I know I'm sorry kids. I didn't mean to, I just thought that it was okay if we wasted electricity. I guess not" Replied Wally the Waster.
