

Working with Google Earth Paths

1. Click on the Directions button (top of the panel)
2. Type in your starting point in the "From" field
3. Type in your ending point in the "To" field
4. Press "Return" or click on the magnifier button
5. The directions plus a "Route" link will show up (the route link is actually the path - note the purple path icon to the left of it)

6. Right click the route and select "Save to My Places"
7. You can rename "Route" by right clicking and selecting "Get Info" and renaming it as you would a placemark.
8. If you have the route selected and click the play button, it will navigate you on a tour from your beginning location to your destination.
